

Why portfolios switch to Casement

One system for the portfolio

Properties, units, leases, and renters in one place instead of spreadsheets and email.

Leases signed online

Landlord-then-renter e-signature, so a lease never needs printing.

Invoicing, not invoice-building

Rent invoices generate automatically, IBAN included.

Required inspections, tracked

Heating, AC, elevators -- due dates recompute themselves.

A portal renters use

Renters see their lease and invoices, and file maintenance requests themselves.

Isolated by design

Every tenant's data is walled off at the database level, not just app logic.

Who it's for

Property management companies and multi-property landlords, typically managing 5-200 rental units, currently running their portfolio on spreadsheets, email, and paper leases rather than dedicated software. Currently onboarding pilot companies in Romania, France, Spain, and Germany.

Request a demo: casement.eu

Lease agreement, proof of residence, and invoice PDFs are generic templates, not jurisdiction-verified legal documents. No production environment exists yet -- this is a live staging demo.
